this book presents an easy to use tool for time series analysis and allows the user to concentrate upon studying time series properties rather than upon how to calculate the necessary estimates the two attached programs provide in one run of the program a

time and frequency domain description of scalar or multivariate time series approximated with a sequence of autoregressive models of increasing orders the optimal orders are chosen by five order selection criteria the results for scalar time series include time domain stochastic difference equations spectral density estimates predictability properties and a forecast of scalar time series based upon the kolmogorov wiener theory for the bivariate and trivariate time series the results contain a time domain description with multivariate stochastic difference equations statistical predictability criterion and information for calculating feedback and granger causality properties in the bivariate case the frequency domain information includes spectral densities ordinary multiple and partial coherence functions ordinary and multiple coherent spectra gain phase and time lag factors the programs seem to be unique and using them does not require professional knowledge of theory of random processes the book contains many examples including three from engineering

originally published in 1961 russian marxist philosophy of science originated among men and women who gave their whole lives to rebellion against established authority the original tension within marxist philosophy between positivism and metaphysics was repressed but not resolved in this first phase of soviet marxism in this volume the author correlates the development of ideas with trends in the cultural revolution and against this background it is possible to understand why debates over general philosophy gave way to conflicts over specific sciences in the aftermath of the first five year plan and why there was a genuine crisis in soviet biology
